

# Cryptocurrency Engineering and Design

MAS.S62

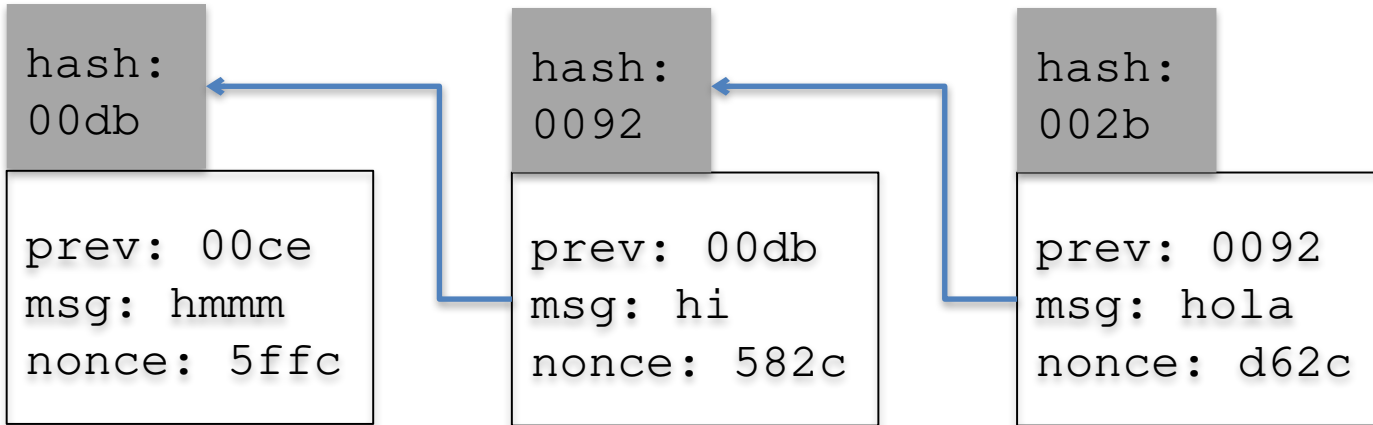

2/19/2018 Lecture 4

Neha Narula

# Recap

- Signatures
- Merkle trees
- RSA, ECDSA

# Blockchain

# Blockchain

# What do we need in a transaction?

# What do we need in a transaction?

- Amount
- User, authorization
- Who you're paying

```
Who: Alice  
Amount: $5  
Payee: Bob  
Auth: SigAlice(??)
```

# What do we need in a transaction?

- Amount
- User, authorization
- Who you're paying

```
Who: Alice  
Amount: $5  
Payee: Bob  
Auth: SigAlice(TXN)
```

# What do we need in a transaction?

- Amount
- User, authorization
- Who you're paying

Who: Alice

Amount: \$5

Payee: Bob

Auth:  $\text{Sig}_{\text{Alice}}(\text{TXN-sig})$

# What do we need in a transaction?

- Amount
- User, authorization
- Who you're paying

Who: Alice

Amount: \$5

Payee: Bob

Auth:  $\text{Sig}_{\text{Alice}}(\text{H}(\text{TXN-sig}))$

# Account based model

Alice: \$10
Bob: \$0

# Account based model

Alice: \$10
Bob: \$0

Who: Alice  
Amount: \$5  
Payee: Bob  
Auth:  $\text{Sig}_{\text{Alice}}(\text{TXN-sig})$

# Account based model

<del>Alice: \$10</del>
<del>Bob: \$0</del>
Alice: \$5
Bob: \$5

Who: Alice

Amount: \$5

Payee: Bob

Auth:  $\text{Sig}_{\text{Alice}}(\text{TXN-sig})$

# Account based model

- Store list of accounts and balances
- A transaction is valid if there is enough balance in the account
- Sender debited, receiver credited

# Replay attacks

<del>Alice: \$10</del>
<del>Bob: \$0</del>
Alice: \$5
Bob: \$5

Who: Alice

Amount: \$5

Payee: Bob

Auth:  $\text{Sig}_{\text{Alice}}(\text{TXN-sig})$

# Replay attacks

<del>Alice: \$10</del>
<del>Bob: \$0</del>
Alice: \$5
Bob: \$5

<del>Alice: \$10</del>
<del>Bob: \$0</del>
<del>Alice: \$5</del>
<del>Bob: \$5</del>
Alice: \$0
Bob: \$10

Who: Alice
A
P Who: Alice
A Amount: \$5
Payee: Bob
Auth: Sig <sub>Alice</sub> (TXN-sig)

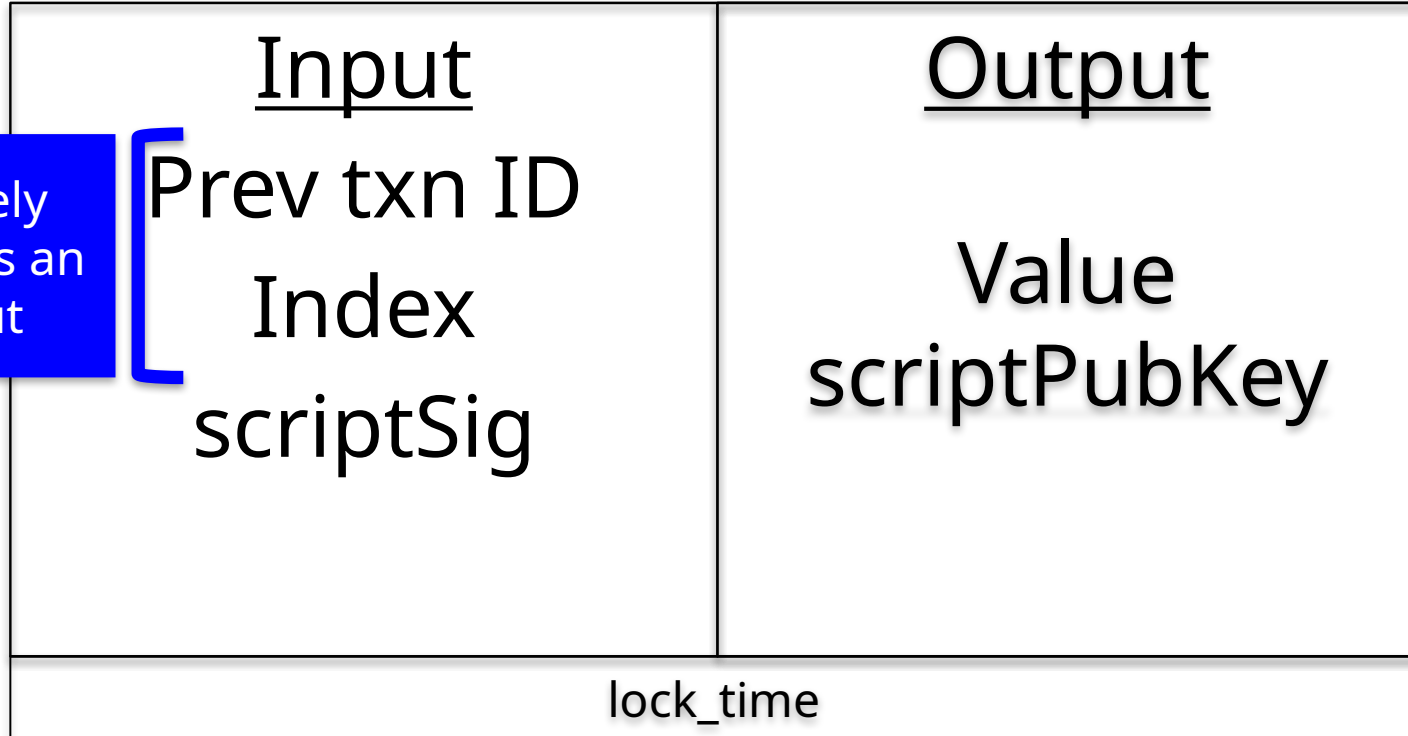

# Unspent Transaction Outputs

- All coins are not the same
- Refer to specific coins when spending
- Coins are consumed; create new ones
- A coin can only be spent once

# Transaction format

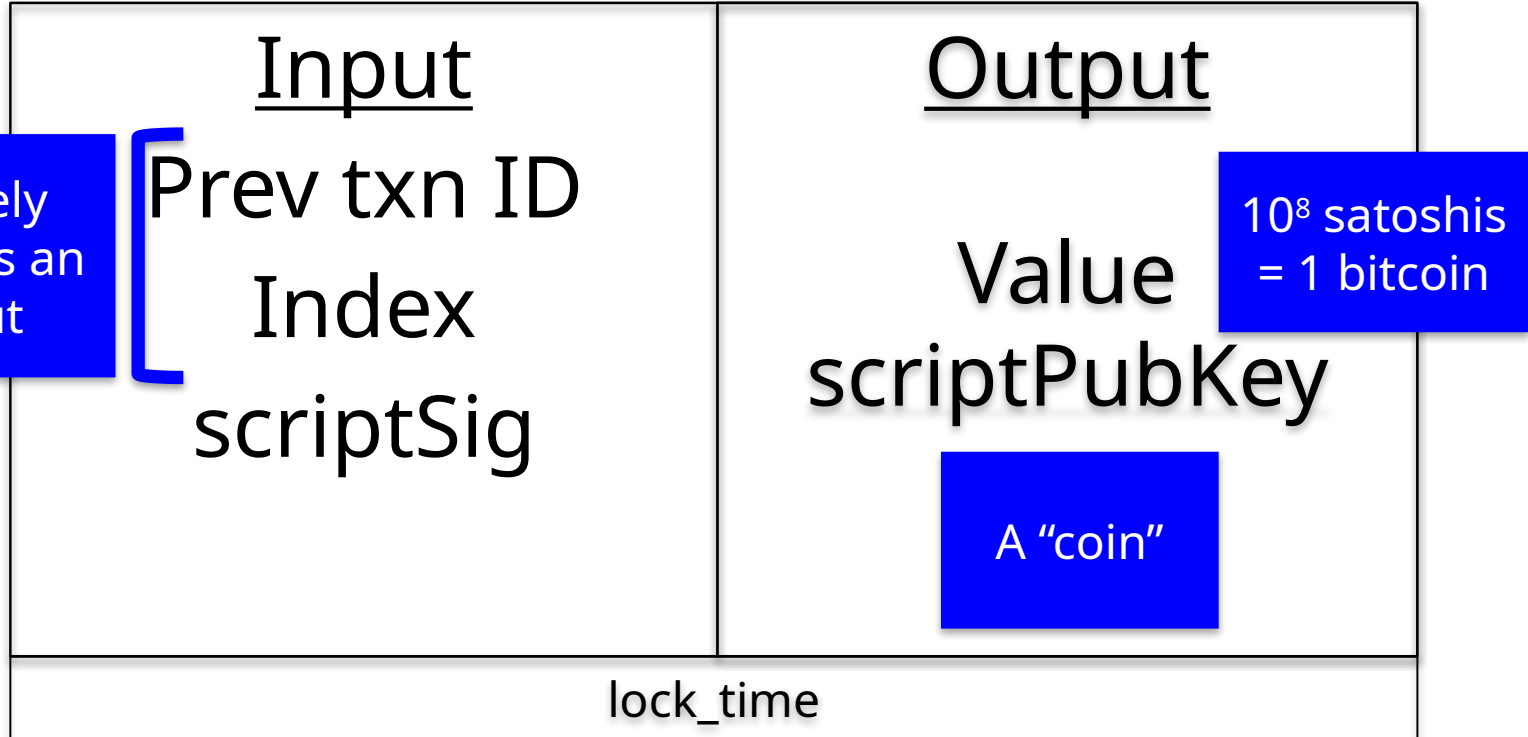

<u>Input</u>	<u>Output</u>
Prev txn ID Index scriptSig	Value scriptPubKey
lock_time	

# Transaction format

Uniquely  
identifies an  
output

# Transaction format

# ScriptSigs and scriptPubkeys

- ScriptPubkeys are predicates
- ScriptSigs help satisfy the predicates
- When can you spend a coin? You know how to produce a satisfying scriptSig

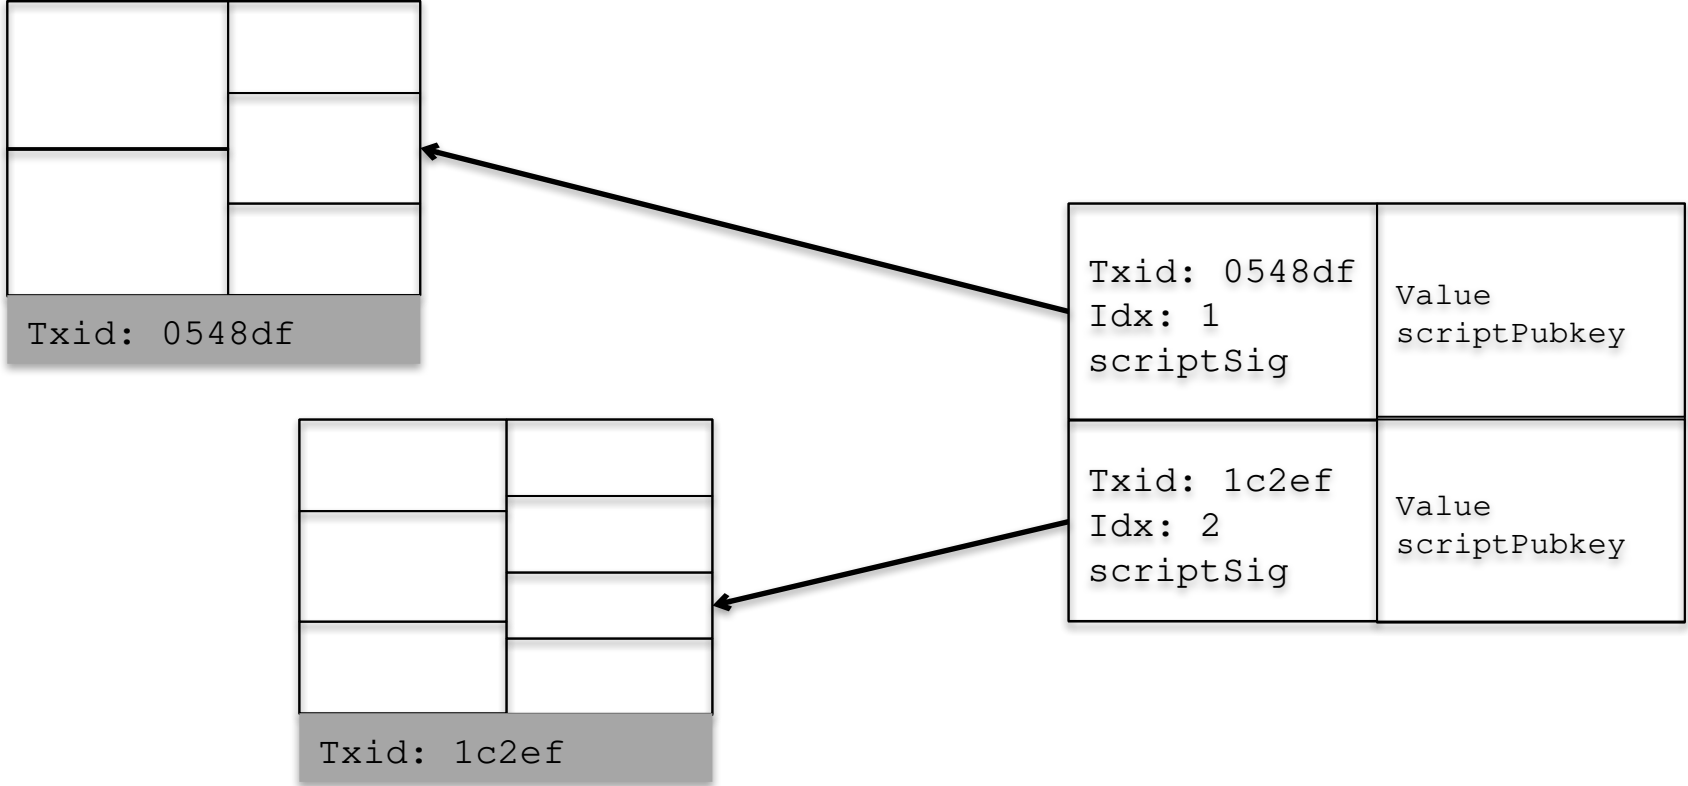

# Multiple inputs and outputs

<u>Input</u> Prev txn ID Index scriptSig	<u>Output</u> Value scriptPubKey
	<u>Output</u> Value scriptPubKey
<u>Input</u> Prev txn ID Index scriptSig	
	<u>Output</u> Value scriptPubKey
lock_time	

# Inputs and outputs are independent

Alice's output	<u>Input</u> Prev txn ID Index scriptSig	<u>Output</u> Value scriptPubKey
		<u>Output</u> Value scriptPubKey
Carol's output	<u>Input</u> Prev txn ID Index scriptSig	<u>Output</u> Value scriptPubKey
		<u>Output</u> Value scriptPubKey
lock_time		

# Transactions

```

]
```

# Consensus rules

- $\text{Sum}(\text{inputs}) \leq \text{Sum}(\text{outputs})$ 
  - One exception: coinbase transactions
  - Why not equal? Fees!
- For every input,  $\text{Eval}(\text{scriptSig} + \text{scriptPubKey}) == \text{true}$
- Output has not already been spent
- `lock_time`

# Pay to Pubkey Hash (P2PKH)

- Idea: Send money to a pubkey
- Pubkeys are big, a hash of a pubkey is only 32 bytes (+1 byte for prefix)
- scriptPubkey: instructions on how to verify a signature of a pubkey that is hashed
- scriptSig: signature, pubkey

# Pay to Pubkey Hash (P2PKH)

ScriptPubkey:

```
OP_DUP  
OP_HASH160  
<H(pubkey)>  
OP_EQUALVERIFY  
OP_CHECKSIG
```

ScriptSig:

```
<sig>  
<pubkey>
```

# Benefits of UTXOs

- Help with replay attacks:
  - State order the number of unspent coins, not all accounts
- Privacy (can generate new pubkeys)

# Downsides of UTXOs

- Complex
- Fungibility: blacklisting coins

# UTXO set

- Every Bitcoin node computes this from the blockchain
- Represents valid set of coins
- ~60M UTXOs
- ~3GB

# Coinbase transaction

<pre>Prev txid:   000...000 Index: 0xFFFFF       FFF scriptSig</pre>	<pre>Value:   1254363542 scriptPubKey</pre>
<pre>lock_time: 0</pre>	

# Coinbase transaction

<pre>Prev txid:   000...000 Index: 0xFFFFF       FFF scriptSig</pre>	<pre>Value: 1254363542 scriptPubKey</pre>
<pre>lock_time: 0</pre>	

12.5 BTC +  
fees
